

Annex 1 - Profiles

Contents

1.	LOT 1 - Core business and IT Processes	2
1.1.	Standard Profiles	2
1.	Project Manager (Junior and Senior)	2
2.	Business Analyst (Junior and Senior)	6
3.	Testing Specialist (Junior and Senior)	9
4.	Solution Architect	11
5.	Security Officer (Junior and Senior)	14
6.	Software Developer (Junior and Senior)	17
7.	Support Officer/Trainer	20
8.	M365 Engineer	23
9.	IBM Solution Architect	25
10.	Network Engineer	26
11.	Data and AI Specialist	29
12.	Cloud (Azure/AWS) Engineer	31
13.	Dev(Sec)Ops Engineer	34
14.	Systems engineer	38
1.2.	Specific profiles.....	41
15.	IT Expert	41
16.	High Level IT Expert	43
2.	LOT 2 – Service Desk	46
1.	Service Desk Operator	46

1. LOT 1 - Core business and IT Processes

1.1. Standard Profiles

1. Project Manager (Junior and Senior)

Key responsibilities

- **Project Planning & Execution**

- Lead end-to-end management of IT projects, focusing on business applications, enterprise software, and information systems ensuring compliance with agreed parameters of cost, schedule, scope and quality.
- Develop detailed project plans, including timelines, milestones, resource allocation and risk assessments.
- Coordinate the execution of project deliverables and ensure adherence to timelines, quality standards, and budget constraints.
- Facilitate agile and traditional project management methodologies to deliver business applications and system implementations.
- Develop and maintain comprehensive project documentation, including strategies, work breakdown structures (WBS), deliverables, quality plans, risk and issues logs, and status reports.

- **Stakeholder Management & Communication**

- Conduct and drive requirements analysis, feasibility studies, and draft project proposals in collaboration with business stakeholders and technical teams.
- Organize and maintain effective communication with project stakeholders, ensuring engagement and alignment throughout the project lifecycle.

- Serve as the primary point of contact for internal stakeholders, including business leaders, IT teams, and external partners.
- Regularly communicate project status, risks, issues, and accomplishments to key stakeholders and executive leadership.
 - Manage and align expectations of cross-functional teams and project sponsors to ensure successful project outcomes.
 - Coordinate and support cross-functional project teams, review deliverables, and ensure tasks are completed on time and to required standards.
 - Actively participate in functional working groups and project progress meetings to provide updates and gather input.
- **Resource & Risk Management**
 - Identify resource needs and manage team assignments, ensuring optimal utilization of technical and business resources.
 - Proactively identify project risks, develop mitigation strategies, and resolve issues in a timely manner.
 - Ensure quality assurance processes are implemented and adhered to throughout the project lifecycle.
- **System Integration & Implementation**
 - Oversee the implementation and integration of business applications and enterprise IT infrastructure.
 - Ensure seamless coordination between internal IT teams and third-party vendors or service providers during application deployments.
 - Lead system upgrades, migrations, and continuous improvement initiatives for business-critical information systems.
- **Budget and Financial Management**
 - Ensure that costs are tracked and controlled within the available project budgets.

- Track project performance, monitor cost and schedule adherence, and proactively manage deviations to keep projects on track.
- Review financial reports and provide assurance that the project is delivered within the allocated budget while meeting the business objectives.
- Estimate and manage project timelines and resource allocations in accordance with project objectives and pre-established budgets.
- **Process Optimization & Continuous Improvement**
 - Analyse existing business processes and systems to recommend and implement improvements.
 - Collaborate with business users to understand their requirements and translate them into IT solutions.
 - Stay informed on emerging technologies and trends to continuously improve project delivery processes and results.

Technical and personal qualifications

- Strong understanding of business applications and information systems architecture.
- Experience with IT project management software and tools (e.g., MS Project, Jira, Azure DevOps).
- Solid grasp of software development life cycle (SDLC), Agile, SAFE, and Waterfall methodologies.
- Knowledge of integration technologies, APIs, middleware, and cloud platforms (e.g., AWS, Azure).
- Familiarity with data management, database technologies, and system integration processes.
- Knowledge of cybersecurity best practices and data protection regulations.
- Familiarity with ITIL and IT service management practices.
- Project management and organisational skills with a strong focus on deadlines and detail.

- Excellent communication and negotiation skills, capable of bridging the gap between technical and non-technical stakeholders.
- Strong leadership and team management capabilities, with the ability to motivate cross-functional teams.
- Analytical thinking and problem-solving abilities, especially in high-pressure or ambiguous environments.
- Ability to balance multiple projects and priorities in a fast-paced setting.
- Proven experience managing complex IT/business application projects.
- Strong Background in both technical and business analysis roles.
- Strong understanding of project management methodologies (e.g. PMBOK, PM², PRINCE2, Agile, Scrum), with valid certifications.
- Experience in bank, finance, IT industry or judicial and governmental areas.
- Excellent communication, writing and stakeholder management skills.
- Proficiency in project management tools (e.g., MS Project, Azure DevOps).
- Excellent knowledge of English, both written and spoken, at least at level C1¹.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor Degree) in Information Technology, Computer Science, Mathematics, Physics, Engineering, Business Administration, or related field.
- Junior profile: less than 8 years of professional experience as project manager.
- Senior profile: 8 or more years of professional experience as project manager.

¹ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

2. Business Analyst (Junior and Senior)

Key responsibilities

- **Requirements Gathering & Analysis:**
 - Collaborate with stakeholders, product owners, and end-users to elicit, analyse, and document business requirements, processes, and workflows.
 - Translate business needs into functional and non-functional software requirements.
 - Lead workshops with the business representatives.
- **Solution Design & Validation:**
 - Develop and maintain business models and process analysis and documentation.
 - Work with technical teams (developers, architects, testers) to design viable software solutions that align with business goals.
 - Participate in the evaluation of proposed solutions and ensure they meet business requirements and user expectations.
 - Work in developing use cases, user stories, wireframes, and mock-ups as needed.
 - Assist Project and Business Managers in drafting and contributing on project documentation (e.g. Business Case).
- **Project & Stakeholder Communication:**
 - Act as a liaison between business units and technical teams to ensure clear understanding and delivery of project goals.
 - Facilitate workshops, meetings, and presentations to stakeholders.
 - Maintain a product backlog and prioritize requirements in collaboration with the product owner and development team.
- **Testing & Quality Assurance Support:**
 - Assist QA teams in creating test cases and validating test results to ensure solutions meet acceptance criteria.
 - Participate in user acceptance testing (UAT) and support end-users during rollouts.

- **Continuous Improvement:**

- Identify opportunities to improve business processes through automation or system enhancements.
- Stay up to date with industry trends, tools, and best practices in business analysis and software development.

Technical and personal qualifications

- Proficient in business analysis tools and techniques (e.g., SWOT, MoSCoW, BPMN, UML).
- Experience with requirement management tools (e.g., Jira, Confluence, Azure DevOps, Trello).
- Understanding of software development methodologies (Agile, Scrum, Kanban, Waterfall).
- Familiarity with software architecture and development concepts.
- Experience with data analysis, SQL, and reporting tools (e.g., Excel, Power BI) is a plus.
- Knowledge of API specifications, system integration, and ERP/CRM systems is a plus.
- Strong analytical and critical thinking skills with the ability to solve complex problems.
- Excellent communication, facilitation, and presentation skills.
- High attention to detail and organizational abilities.
- Ability to work independently and collaboratively in cross-functional teams.
- Strong interpersonal skills with the ability to engage with both technical and non-technical stakeholders.
- Proactive, adaptable, and open to learning.
- Good knowledge of large organisation administrative business processes.
- Good knowledge of analysis/modelling tools and techniques (use case diagram, state diagram, entity relationship model etc.).
- Good knowledge of BPMN or UML or other methodologies or techniques.
- Knowledge of software development methodologies (e.g. PM², Agile).

- Strong capacity in preparing and writing business analysis.
- Capability to speak to business and technical audiences.
- Ability to apply high quality standards.
- Capability of working in an international/ multicultural environment.
- Excellent knowledge of English, both written and spoken, at least at level C1².

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor's degree) in Information Technology, Computer Science, Mathematics, Physics, Engineering, Business Administration, or related field.
- Junior profile: less than 8 years of professional experience in business analysis.
- Senior profile: 8 or more years of professional experience in business analysis.

² Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

3. Testing Specialist (Junior and Senior)

Key responsibilities

- **Test Planning & Strategy:**
 - Develop and maintain comprehensive test plans, test cases, and test scripts based on product requirements and specifications.
 - Define and implement testing strategies (manual and automated) for new and existing software.
- **Testing & Bug Tracking:**
 - Execute manual and automated tests to identify software defects.
 - Log, track, and manage defects using appropriate tools (e.g., Azure DevOps, Bugzilla).
 - Collaborate with developers and product teams to isolate, replicate, and resolve bugs.
 - Construction of test scenarios and scripts.
 - Strong programming skills and proven knowledge of testing automation tools.
- **Quality Assurance:**
 - Ensure compliance with quality standards, guidelines, and best practices throughout the software development lifecycle (SDLC).
 - Perform regression, integration, system, user acceptance, and performance testing.
- **Documentation & Reporting:**
 - Prepare detailed test reports, metrics, and documentation to support continuous improvement.
 - Provide feedback on usability, functionality, and performance issues.
- **Collaboration & Continuous Improvement:**
 - Work closely with development, product, and UX teams to ensure seamless integration of QA processes.
 - Participate in sprint planning, reviews, and retrospectives in Agile/Scrum environments.

- Contribute to the continuous enhancement of QA methodologies, tools, and processes.

Technical and personal qualifications

- Proficiency in test management tools (e.g., Azure DevOps, TestRail).
- Experience with defect tracking tools (e.g., Azure DevOps, OTRS, ServiceNow).
- Solid understanding of SDLC, STLC, and Agile methodologies.
- Knowledge of automation frameworks and tools (e.g., Selenium, webdriver.io, Postman or similar).
- Knowledge of scripting or programming languages (e.g., Python, Java, JavaScript) is a **plus**.
- Experience with API testing, database validation (SQL), and performance/load testing tools (e.g., JMeter) is a **plus**.
- Knowledge of CI/CD tools and DevOps practices (e.g., Jenkins, GitLab CI).
- Excellent attention to detail and analytical thinking.
- Strong communication and documentation skills.
- Methodical Problem-solving mindset and ability to work independently.
- Collaborative, proactive, and committed to continuous learning.
- Ability to manage multiple tasks and priorities in a fast-paced environment.
- Ability to cope with fast changing technologies used in application development.
- Ability to identify and solve business problems through creative and practical solutions.
- Knowledge of Agile project organisation and Agile Testing principles.
- Excellent knowledge of English, both written and spoken, at least at level C1³.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor's degree) in Information Technology,

³ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

Computer Science, Mathematics, Physics, Engineering, Business Administration, or related field.

- Junior profile: less than 8 years of professional experience in software/system testing. ISTQB Foundation Level Certification.
- Senior profile: 8 or more years of professional experience in software/system testing. One or more ISTQB Advanced Level Certifications.

4. Solution Architect

Key responsibilities

- **Solution Design & Architecture:**
 - Design end-to-end technical solutions aligned with business requirements, IT strategy, and enterprise architecture standards.
 - Define architecture blueprints, system interfaces, data flows, and integration points.
 - Choose appropriate technologies, platforms, and tools to support scalability, performance, and security needs.
 - Perform analysis of business processes and information systems portfolio.
 - Elaborate data modelling and corporate data flow analysis.
 - Elaborate high level designs and costs/benefits analysis.
- **Project Oversight & Technical Leadership:**
 - Collaborate with project managers, developers, QA teams, and DevOps engineers to ensure successful implementation of solutions from the assistance in the roadmap definition to the execution and the implementation of the architecture.
 - Provide technical leadership and guidance during project execution, including development best practices, code reviews, and risk management.
 - Ensure compliance with architectural standards, governance processes, and cybersecurity protocols.
- **Stakeholder Engagement:**
 - Engage with business stakeholders to understand functional requirements, constraints, and goals.
 - Translate business objectives into technology solutions, balancing innovation, feasibility, cost, and risk.
 - Prepare and present solution proposals, architecture documentation, and technical roadmaps to stakeholders.
- **Integration & System Optimization:**

- Oversee integration of new systems with existing infrastructure, including APIs, legacy systems, and third-party platforms.
- Identify opportunities for system optimization, cost-efficiency, and modernization.
- Evaluate current system capabilities and propose enhancements or rearchitecting where appropriate.
- **Innovation & Continuous Improvement:**
 - Stay up-to-date with emerging technologies, trends, and best practices in architecture and software engineering.
 - Contribute to continuous improvement of architectural frameworks, standards, and governance models.
 - Support strategic planning and technology evaluations for long-term IT evolution.

Technical and personal qualifications

- Strong expertise in designing scalable, secure, and resilient software architectures (monolithic, microservices, serverless, etc.).
- Proficiency with cloud platforms (e.g., AWS, Azure, GCP) and hybrid architectures.
- Experience with application integration, APIs (REST, SOAP), middleware, and message queues (e.g., Kafka, RabbitMQ).
- Solid knowledge of database technologies (SQL, NoSQL), data architecture, and storage solutions.
- Knowledge of DevOps practices, CI/CD pipelines, containerization (Docker), and orchestration (Kubernetes).
- Proficient in enterprise architecture frameworks (e.g., TOGAF, Zachman).
- Experience with enterprise systems (e.g., ERP, CRM, CMS) and architecture modelling tools (e.g., ArchiMate, Sparx EA).
- Good knowledge of enterprise architecture models and tools.
- Good knowledge of business processes analysis.
- Knowledge of software maturity models.
- Strong analytical and strategic thinking with the ability to solve complex problems.

- Excellent communication and presentation skills for both technical and non-technical audiences.
- Technical leadership and team collaboration capabilities across technical and business units.
- High attention to detail with a focus on performance, security, and reliability.
- Adaptability and resilience in fast-paced or changing environments.
- Capability of working in an international/ multicultural environment.
- Excellent knowledge of English, both written and spoken, at least at level C1⁴.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor's degree) in Information Technology, Computer Science, Mathematics, Physics, Engineering, Business Administration, or related field.
- Senior profile: 8 or more years of profession experience in solution and system architecture.

⁴ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

5. Security Officer (Junior and Senior)

Key responsibilities

- **Security Strategy & Governance:**
 - Develop, implement, and maintain the organization's information security strategy, policies and procedures, controls and monitoring measures.
 - Ensure alignment of security initiatives with business objectives, compliance requirements, and industry best practices.
 - Lead risk assessments, security audits, and gap analyses to identify and mitigate potential threats.
 - Provision of security studies and risks assessments for IT solutions, within running projects.
- **Monitoring, Detection & Response:**
 - Monitor IT infrastructure for security breaches, incidents, and vulnerabilities using advanced security tools and SIEM platforms.
 - Lead incident response efforts, including investigation, containment, mitigation, and post-incident reporting.
 - Coordinate with IT teams to patch vulnerabilities and enforce secure configurations.
 - Provision of security audits of systems, infrastructure and databases.
- **Compliance & Regulatory:**
 - Ensure compliance with relevant laws, standards, and frameworks (e.g. Reg.2018/1725, Reg.2023/2841, ISO 27001, NIST).
 - Maintain documentation and evidence for audits and regulatory inspections.
 - Coordinate internal and external security assessments, penetration tests, and compliance audits.
- **Security Awareness & Training:**
 - Develop and conduct security awareness training for employees to foster a culture of security.
 - Establish protocols and best practices for secure behaviour, such as phishing prevention and password management.

- **System & Infrastructure Security:**

- Oversee access control, identity management, encryption, firewalls, antivirus, and endpoint security systems.
- Collaborate with system administrators and network engineers to ensure security is embedded in all layers of the IT environment.
- Evaluate and implement security tools and technologies to enhance the organization's security posture.
- Manage the organisation and the implementation of security tests.

- **Third-Party Risk Management:**

- Assess third-parties for security risk and ensure contractual compliance with security standards, where applicable.
- Conduct periodic reviews of external services, cloud providers, and managed service providers.

Technical and personal qualifications

- Strong understanding of cybersecurity principles, threat landscapes, and risk management.
- Proficiency in security technologies and tools such as firewalls, IDS/IPS, antivirus, endpoint protection, DLP, VPNs, and SIEM platforms (e.g., Splunk, QRadar).
- Strong knowledge of cloud security (e.g., AWS, Azure, GCP security tools and configurations).
- Proficiency with identity and access management (IAM), multi-factor authentication (MFA), and public key infrastructure (PKI).
- Understanding of networking concepts (TCP/IP, DNS, VPNs), operating systems (Linux, Windows), and security protocols (SSL/TLS, HTTPS, IPsec).
- Experience with vulnerability scanning tools (e.g., Nessus, Qualys) and penetration testing coordination.
- High ethical standards, integrity, and confidentiality.
- Strong analytical thinking and problem-solving skills.
- Excellent communication and report-writing abilities for both technical and non-technical audiences.

- Leadership, collaboration, and influencing skills across departments and management levels.
- Ability to manage multiple priorities in a high-pressure, fast-paced environment.
- Good knowledge of information systems security.
- Good knowledge of IT security standards.
- Knowledge of security management methodologies and tools.
- Strong capacity in preparing and writing studies.
- Ability to apply high quality standards.
- Ability to draft high quality documentation and presentations adapted to the audience.
- Capability of working in an international/ multicultural environment.
- Excellent knowledge of English, both written and spoken, at least at level C1⁵.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor's degree) in Information Technology, Computer Science, Mathematics, Physics, Engineering, Business Administration, or related field.
- Junior profile: less than 8 years of professional experience in a similar IT security role.
- Senior profile: 8 or more years of profession experience in a similar IT security role.

⁵ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

6. Software Developer (Junior and Senior)

Key responsibilities

- **Software Design & Development**

- Design, develop, and maintain software applications based on business requirements and technical specifications.
- Write clean, efficient, and well-documented code following coding standards and best practices.
- Develop unit tests, integration tests, and ensure the software performs reliably and is secure.
- Collaborate with front-end and back-end teams to create fully integrated solutions.
- Maintain and optimize existing codebases, ensuring scalability and efficiency of applications.
- Implement best practices in terms of code versioning, code management and release management.

- **Collaboration & Communication**

- Work closely with cross-functional teams (product managers, QA engineers, UX/UI designers) to deliver high-quality software solutions.
- Participate in daily standups, sprint planning, retrospectives, and code reviews within an Agile development environment.
- Communicate effectively with stakeholders to gather requirements, provide project updates, and resolve issues promptly.

- **Problem-Solving & Debugging**

- Identify, troubleshoot, and resolve software defects, bugs, and performance issues.
- Analyse and optimize system performance, focusing on responsiveness, speed, and stability.
- Participate in continuous integration/continuous deployment (CI/CD) processes to ensure smooth deployments.

- **Continuous Learning & Improvement**

- Stay up-to-date with the latest industry trends, tools, and technologies to continually enhance your technical skill set.
- Suggest improvements to development workflows and practices, contributing to the team's overall efficiency.
- Mentor junior developers and collaborate in knowledge sharing.

Technical and personal qualifications

- **Programming Languages:** Proficiency in languages such as Java, C#, Python, JavaScript, Ruby, PHP, IBM Frameworks (Case manager, Business Automations, BPM) or others
- **Frameworks & Libraries:** Familiarity with popular frameworks and libraries such as React, Angular, Spring Boot, Django, .NET, etc.
- **Database Management:** Experience with SQL databases (e.g., MySQL, PostgreSQL) and NoSQL databases (e.g., MongoDB, Redis).
- **Version Control:** Strong experience with version control systems like Git, GitHub, GitLab, or Bitbucket.
- **Software Development Lifecycle (SDLC):** Solid understanding of Agile, Scrum, or Kanban methodologies.
- **APIs & Web Services:** Experience in building and integrating RESTful APIs, WebSockets, or other web services.
- **Cloud Technologies:** Familiarity with cloud platforms such as AWS, Azure, or Google Cloud (if applicable).
- **Testing Frameworks:** Experience in writing unit tests using tools like JUnit, Mocha, Jasmine, or others.
- **DevOps & CI/CD:** Experience with continuous integration tools like Azure DevOps, Jenkins, GitLab CI, or Travis CI.
- **Collaboration tools:** Good knowledge of tools like Azure DevOps, Jira, Confluence.
- **Problem Solving:** Excellent problem-solving skills with the ability to think critically and debug complex systems.
- **Communication:** Strong written and verbal communication skills to interact with both technical and non-technical stakeholders.

- **Team Collaboration:** Ability to collaborate effectively within a team and contribute to a positive, agile work environment.
- **Time Management:** Ability to manage time efficiently, prioritize tasks, and meet deadlines in a fast-paced environment.
- **Attention to Detail:** Strong attention to detail and a commitment to producing high-quality, reliable software.
- **Adaptability:** Willingness to learn new technologies and adapt to changing requirements.
- Excellent knowledge of English, both written and spoken, at least at level C1⁶.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor's degree) in Information Technology, Computer Science, Mathematics, Physics, Engineering, Business Administration, or related field.
- Junior profile: less than 5 years of professional experience in development.
- Senior profile: 5 or more years of profession experience in development.

⁶ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

7. Support Officer/Trainer

Key responsibilities/Tasks

- Support the implementation, operation, and supervision of enterprise-level IT infrastructure and services.
- Deliver second-line technical support for end-users, covering hardware, software, M365 applications, video conferencing systems, and business-critical IT services.
- Coordinate and conduct onboarding of new EPPO staff members, external service providers, trainees, and interim personnel, ensuring seamless IT access and orientation.
- Assist with the installation, relocation, and replacement of IT equipment, ensuring minimal disruption to operations.
- Manage and support the lifecycle of IT assets, including deployment, tracking and maintenance.
- Develop, document and test Standard Operating Procedures (SOPs) to ensure consistency and best practices across support activities.
- Log, troubleshoot and resolve technical incidents; escalate complex issues to higher-level support as required.
- Provide technical input and hands-on support for IT projects, participating in planning, testing, and deployment phases.
- Engage proactively with the user community to assess training needs and skill gaps related to IT tools and services.
- Design, prepare and deliver user training sessions in both group settings and individual formats across various IT domains.
- Develop user-friendly documentation such as manuals, process guides, and how-to documents for IT systems and applications.
- Create modern training materials, including videos, interactive tutorials and e-learning resources.
- Ensure adherence to IT security policies and data protection regulations in all support and training activities.
- Contribute to service improvement initiatives and collaborate with internal and external stakeholders for continuous IT service enhancement.

Technical and personal qualifications

- Proven professional experience in IT support, including second-line support and direct end-user assistance across hardware, software, and network-related issues.
- Strong technical knowledge in diagnosing and resolving issues related to networking, infrastructure, servers, enterprise systems, and business applications.
- Proficient in Microsoft 365 and Azure environments, with familiarity in applying IT service management best practices such as ITIL (incident, change, and configuration management).
- Understanding of collaborative platforms (e.g., Confluence, SharePoint) and internal communication tools or social networks within organizations.
- Demonstrated ability to assess user needs and design/deliver tailored IT training in various formats.
- Excellent organizational, time management, and planning skills; able to manage multiple priorities and deadlines.
- Strong communication and interpersonal skills, with the ability to interact effectively with both technical and non-technical stakeholders.
- Ability to work autonomously as well as collaboratively in a multicultural, multilingual environment, contributing to ongoing projects and cross-functional teams.
- Resilience and flexibility under pressure; ability to adapt quickly to evolving priorities and provide support in high-demand situations.
- Knowledge of data protection principles, cybersecurity awareness, and adherence to IT security protocols.
- A proactive and improvement-driven mindset, with a willingness to contribute to IT service enhancement initiatives.
- Excellent knowledge of English, both written and spoken, at least at level C1⁷.
- Relevant certifications (e.g., ITIL Foundation, Microsoft Certified: Modern Desktop Administrator Associate, CompTIA Network+/Security+) are considered a strong asset.
- Excellent knowledge of English, both written and spoken, at least at level C1⁸.

⁷ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

⁸ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor's degree), or post-secondary education, or secondary education with equivalent professional experience, in Computer Science or related field.

8. M365 Engineer

Key responsibilities

- Lead and support the adoption of Microsoft 365 modern workplace technologies, driving digital transformation across the organization.
- Design, plan, develop and implement M365-based solutions leveraging services such as SharePoint Online, Microsoft Teams, Exchange Online, OneDrive, Power Platform (Power Automate, Power Apps), and related tools.
- Provide hands-on administration, configuration and support of the M365 environment, including user accounts, licenses, and security groups.
- Troubleshoot and resolve complex technical issues related to M365 services and integrations.
- Collaborate with stakeholders to analyse business requirements, prioritize needs, and evaluate technical solution options.
- Deliver expert-level consultation, including technology watch, evaluation studies, solution patterns, security and compliance best practices, and architectural design aligned with Microsoft's evolving roadmap.
- Ensure compliance with IT security, data protection, and governance standards within the EPPO M365 tenant.
- Enforce M365 governance policies, including data retention, compliance, and access control measures.
- Automate routine tasks and configurations using PowerShell, Power Automate, or other scripting tools.
- Contribute to project documentation, including vision design, solution architecture, deployment plans and standard operating procedures.
- Implement and maintain processes to manage the lifecycle of user accounts, licenses, security groups and role-based access control in the M365 ecosystem.
- Support monitoring and performance optimization of the M365 tenant; recommend improvements and cost-effective use of licenses and services.
- Assist with user adoption, provide advanced troubleshooting support and contribute to internal knowledge bases and training resources.
- Operate within Agile delivery frameworks, contribute to planning, sprint activities, and continuous improvement.

Technical and personal qualifications

- In-depth knowledge and proven hands-on expertise in M365 (administration, configuration, design, deployment).
- In-depth knowledge and proven hands-on expertise in Microsoft 365, including administration, configuration, solution design, and deployment across enterprise environments.
- Strong ability to produce clear, structured and audience-appropriate technical documentation (procedures, architecture diagrams, user guides, etc.).
- Demonstrated experience as an M365 technology expert in at least one of the following domains:
 - Collaboration & Communication: Exchange Online, SharePoint Online, Microsoft Teams (incl. Teams Voice), OneDrive, Microsoft Viva, Office 365, Power Platform.
 - Identity & Access Management: Azure Active Directory, license management, conditional access, MFA, identity protection, authentication flows.
 - Endpoint & Device Management: Microsoft Intune, Autopilot, Endpoint Manager, Microsoft 365 Defender, Azure Security Centre.
 - Information Protection & Governance: Microsoft Purview, DLP, sensitivity labels, Microsoft Information Protection, Microsoft Sentinel, encryption, data lifecycle management, retention policies, compliance auditing.
- Good understanding of networking principles, ICT infrastructure, and system integrations.
- System engineering background with knowledge of on-premises environments such as Active Directory, Exchange Server, and hybrid identity architectures.
- Familiarity with automation and scripting tools, particularly PowerShell and Power Automate.
- Experience working in Agile environments; certification in PM2-Agile, Scrum, or equivalent is a **plus**.
- Working knowledge of Azure DevOps for CI/CD pipelines, work item tracking and release management.
- Excellent knowledge of English, both written and spoken, at least at level C1⁹.

Education and professional experience

⁹ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor's degree) in Information Technology, Computer Science, Mathematics, Physics, Engineering, Business Administration, or related field

9. IBM Solution Architect

Key responsibilities

- Design and implement the solution architecture for the business solutions based on IBM technology and other core modules integrated within the CMS Ecosystem.
- Collaborate with external suppliers to monitor vendors roadmap and to identify opportunities and milestones to recommend for the EPPO.
- Involvement in analysis of business processes and information systems portfolio, throughout close collaboration with business analysts.
- Lead and organise workshops and demo sessions with end users to elaborate new business solutions.
- Drive the data modelling and corporate data flow analysis for the CMS ecosystem.
- Elaborate high level designs, detailed designs and costs/benefits analysis.

Technical and personal qualifications

- Excellent proven knowledge of following IBM products – IBM FileNet, IBM Content Navigator, IBM Business Automation workflow, Datacap, IBM Enterprise Bus, Aspera, IBM Cloud Pak.
- Knowledge of latest IBM technologies related to AI and automation.
- Good knowledge of enterprise architecture models and tools.
- Good knowledge of business processes analysis.
- Previous experience in Agile DevOps teams in a technical role.
- Strong capacity in writing and presenting studies.
- Excellent knowledge of English, both written and spoken, at least at level C1¹⁰.
- Capability of working in an international/ multicultural environment.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor's degree) in Information Technology,

¹⁰ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

Computer Science, Mathematics, Physics, Engineering, Business Administration, or related field

- 8 or more years of professional experience in IBM technologies and solution architecture.

10. Network Engineer

Key responsibilities

- **Network Design & Implementation:**

- Design, configure, and implement network infrastructure solutions that meet business needs, ensuring scalability, performance, and reliability.
- Install, configure, and manage network devices (routers, switches, firewalls, access points) and ensure seamless connectivity between systems.
- Evaluate and recommend hardware, software, and network infrastructure solutions based on technical requirements.

- **Network Monitoring & Troubleshooting:**

- Monitor network performance using industry-standard monitoring tools (e.g., SolarWinds, PRTG, Nagios) and ensure optimal uptime and throughput.
- Troubleshoot, diagnose, and resolve network-related issues, including hardware and software failures, connectivity problems, and performance degradation.
- Conduct network traffic analysis and make recommendations for improvements in performance, security, and efficiency.

- **Security & Compliance:**

- Implement and manage network security solutions, including firewalls, VPNs, intrusion detection/prevention systems (IDS/IPS), and access control policies.
- Conduct regular network security audits to ensure compliance with internal security policies and external regulations (e.g., GDPR, HIPAA).
- Apply security patches and updates, monitor for security breaches, and investigate any incidents.

- **Network Optimization & Upgrades:**

- Plan and implement network upgrades to ensure infrastructure meets evolving business needs and technological advancements.
- Optimize network traffic, adjust configurations, and implement load balancing to maintain high network performance.

- Collaborate with IT teams to ensure integration and compatibility with other enterprise systems (e.g., cloud, data centres).
- **Documentation & Reporting:**
 - Maintain comprehensive documentation of network configurations, IP address schemes, network topologies, and infrastructure changes.
 - Create and update network diagrams, policies, procedures, and network troubleshooting guides.
 - Generate reports on network performance, security incidents, and infrastructure improvements for management review.
- **Collaboration & Support:**
 - Work closely with cross-functional teams, including IT support, systems administrators, and security teams, to resolve complex issues.
 - Provide network support for remote employees, including VPN access, VoIP systems, and troubleshooting connectivity issues.
 - Assist in training junior network engineers and provide guidance on network best practices.

Technical and personal qualifications

- **Technical Skills:**
 - **Networking Protocols:** In-depth knowledge of TCP/IP, DNS, DHCP, HTTP, SNMP, and VPN technologies.
 - **Routing & Switching:** Experience with network routing and switching protocols such as OSPF, BGP, EIGRP, VLANs, and Spanning Tree Protocol (STP).
 - **Network Devices:** Proficiency in configuring and managing network devices like Cisco, Juniper, HP, or other routers, switches, firewalls, and wireless access points.
 - **Network Security:** Strong knowledge of network security principles, including firewall management, VPN, IPS/IDS, endpoint security, and ACLs.
 - **Monitoring & Troubleshooting Tools:** Experience using network monitoring tools (e.g., SolarWinds, PRTG, Wireshark) for performance tracking and issue resolution.

- **Cloud & Virtualization:** Familiarity with cloud network architecture (AWS, Azure) and virtualized network environments (SDN, VMware NSX).
- **IPv6:** Knowledge and experience with IPv6 implementation and migration.
- **WAN Technologies:** Experience with WAN technologies such as MPLS, SD-WAN, and VPNs.
- **Wi-Fi Networks:** Understanding of wireless network standards (e.g., 802.11, Wi-Fi 6) and experience configuring wireless networks.
- **Personal Skills:**
 - Strong **problem-solving** skills and the ability to think analytically and strategically when troubleshooting network issues.
 - Excellent **communication** skills for interacting with technical and non-technical stakeholders and writing clear documentation.
 - Ability to work independently and as part of a **collaborative team**, managing multiple priorities in a fast-paced environment.
 - **Attention to detail** with the ability to manage large-scale network infrastructure projects and implementations.
 - **Adaptability** to stay current with emerging technologies and industry trends.
 - Strong **time management** and organizational skills, able to prioritize tasks and meet deadlines.
 - Excellent knowledge of English, both written and spoken, at least at level C1¹¹.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least four (4) years (Master degree) in Information Technology, Computer Science, Engineering or related field.
- Over 8 years of professional experience as a Network Engineer or equivalent, directly relevant to the tasks and projects described.

¹¹ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

11. Data and AI Specialist

Key responsibilities

- **Collaborating on the creation of advanced data models and ontologies** to support structured data organization, enabling seamless data integration and enhancing semantic interoperability across the enterprise.
- **Engaging proactively with cross-functional teams** to deeply understand their data needs, providing expert technical guidance on best practices and cutting-edge technologies.
- **Developing a comprehensive data catalogue** to significantly enhance data discoverability, accessibility, and governance throughout the organization.
- **Contribution to crafting and executing a data strategy and governance model**, aligned with organizational objectives.
- **Designing and developing Artificial Intelligence pipelines** for business applications, enabling enhanced data processing and insights.
- **Designing and implementing real-time data reporting solutions**, ensuring data accuracy, automation, scalable storage solutions, and intuitive data visualization platforms.
- **Actively participating in meetings**, contributing groundbreaking ideas, and offering insightful feedback to drive project excellence and innovation.

Technical and personal qualifications

- Proven expertise in data management and data governance tools such as Apache Atlas or DataHub, enhancing data discoverability and governance across the organization.
- Extensive design and deployment experience in data pipelines, including hands-on experience in AI, Machine Learning, and Generative AI (GenAI) solutions.
- Hands-on proficiency with data ingestion, storage, and visualization techniques using tools like the ELK stack, IBM solutions, Microsoft, or similar platforms.
- Hands-on experience with deployment and fine-tuning Large Language Models (LLMs) and Transformers to align with specific business requirements and data environments, with familiarity in frameworks like Hugging Face Transformers, TensorFlow, and PyTorch for sophisticated model development.

- Proficiency in Python programming, utilizing machine learning libraries for NLP and GenAI to develop innovative solutions.
- In-depth knowledge of containerization, enhancing application portability and scalability.
- Strong understanding of data structures, algorithms, and software design patterns, applying best practices to build robust and efficient systems.
- Proven ability to collaborate with cross-functional teams and stakeholders, fostering teamwork and driving projects to success.
- Excellent knowledge of English, both written and spoken, at least at level C1¹².

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least four (4) years (Master degree) in Information Technology, Computer Science, Mathematics, Physics, Engineering, Business Administration, or related field
- Over 5 years of professional experience as an AI Engineer or equivalent, directly relevant to the tasks and projects described.

¹² Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

12. Cloud (Azure/AWS) Engineer

Key responsibilities

- **Cloud Infrastructure Design & Implementation**
 - Design, implement, and manage scalable, secure, and high-performance cloud infrastructure solutions on **Microsoft Azure** or **Amazon Web Services (AWS)**.
 - Collaborate with development, operations, and security teams to define cloud architecture that supports both business goals and technical requirements.
 - Build and maintain automated infrastructure provisioning using tools such as **Terraform**, **CloudFormation**, or **Azure Resource Manager (ARM)** templates.
- **Cloud Management & Optimization**
 - Monitor and maintain cloud resources to ensure optimal performance, scalability, and cost efficiency.
 - Implement cost-management practices to monitor and control cloud expenditures using native cloud tools such as **AWS Cost Explorer** or **Azure Cost Management**.
 - Troubleshoot and resolve issues related to cloud services, ensuring high availability and minimal downtime.
- **Security & Compliance**
 - Implement and manage cloud security policies, including identity and access management (IAM), encryption, and network security.
 - Ensure cloud environments adhere to industry best practices, security guidelines, and compliance standards (e.g., **GDPR**, **HIPAA**, **SOC 2**).
 - Regularly perform security audits, vulnerability assessments, and patching of cloud infrastructure.
- **Automation & DevOps Integration**
 - Collaborate with DevOps teams to integrate cloud infrastructure with continuous integration/continuous deployment (CI/CD) pipelines.

- Implement infrastructure-as-code (IaC) practices to automate and version control cloud resources.
- Utilize tools like **Jenkins**, **GitLab CI**, **Azure DevOps**, or **AWS CodePipeline** to streamline and optimize workflows.
- **Cloud Migration & Integration**
 - Lead the planning, migration, and integration of on-premises systems to the cloud, ensuring seamless transition with minimal disruption.
 - Assist in the adoption of hybrid cloud architectures, integrating on-prem and cloud systems.
 - Provide expertise in cloud-native applications, containerization (e.g., **Docker**, **Kubernetes**), and serverless technologies.
- **Documentation & Reporting**
 - Maintain accurate and up-to-date documentation for cloud architecture, configurations, processes, and procedures.
 - Generate reports on system performance, usage, and security compliance for management.
 - Provide knowledge transfer and training for internal teams on cloud best practices.
- **Collaboration & Support**
 - Work closely with cross-functional teams, including IT support, systems administrators, and security teams, to resolve complex issues.
 - Assist in training junior engineers and provide guidance on best practices.

Technical and Personal Qualifications

- **Technical Skills**
 - **Cloud Platforms:** Advanced experience with **Azure** and/or **AWS**, including core services such as **EC2**, **S3**, **Lambda**, **RDS**, **VPC**, **Azure Virtual Machines**, **Azure Blob Storage**, **App Services**, **AKS** (Azure Kubernetes Service), and **AWS CloudFormation**.
 - **Cloud Security:** Deep understanding of cloud security concepts including **IAM**, **role-based access control (RBAC)**, encryption, and secure network design.

- **Infrastructure as Code (IaC):** Proficient in **Terraform**, **CloudFormation**, or **Azure ARM templates** for automated provisioning and management of cloud resources.
- **Containerization & Orchestration:** Experience with **Docker**, **Kubernetes**, and cloud-based container services such as **Amazon ECS** or **Azure Kubernetes Service (AKS)**.
- **CI/CD & Automation Tools:** Familiarity with CI/CD pipeline tools such as **Jenkins**, **GitLab CI**, **AWS CodePipeline**, or **Azure DevOps**.
- **Scripting & Automation:** Strong skills in scripting languages such as **Bash**, **PowerShell**, **Python**, or **Ruby** for automation tasks.
- **Networking:** Knowledge of cloud networking, including **VPC**, **subnets**, **firewalls**, **VPNs**, and **load balancing** within cloud environments.
- **Monitoring & Performance:** Experience using monitoring tools like **CloudWatch**, **Azure Monitor**, or third-party tools like **Prometheus**, **Datadog**, or **New Relic** for cloud resource management.
- **Personal Skills**
 - **Problem-Solving & Troubleshooting:** Excellent analytical and problem-solving skills for diagnosing and resolving complex cloud-related issues.
 - **Communication & Collaboration:** Strong verbal and written communication skills, able to interact effectively with cross-functional teams and business stakeholders.
 - **Attention to Detail:** Ability to design secure, scalable, and cost-efficient solutions with precision and care.
 - **Time Management:** Proven ability to manage multiple tasks and priorities, working in a fast-paced and dynamic environment.
 - **Adaptability & Continuous Learning:** Willingness to stay current with the evolving cloud landscape, new features, services, and industry trends.
 - Excellent knowledge of English, both written and spoken, at least at level C1¹³.

Education and professional experience

¹³ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

- A level of education which corresponds to completed university studies, attested by a diploma, of at least four (4) years (Master degree) in Information Technology, Computer Science, Engineering or related field.
- Over 5 years of professional experience as a Cloud (Azure/AWS) Engineer or equivalent, directly relevant to the tasks and projects described.

13. Dev(Sec)Ops Engineer

Key responsibilities

- **Security Integration in DevOps Pipeline**
 - Integrate security practices into the **DevOps pipeline**, ensuring that security is an integral part of the software development and deployment lifecycle (SDLC).
 - Collaborate with development and operations teams to automate security checks, vulnerability scanning, and compliance assessments within the CI/CD pipeline.
 - Work with developers to embed **security best practices** (e.g., **OWASP** guidelines, secure coding principles) into the application code from the earliest stages.
- **Continuous Security Monitoring & Vulnerability Management**
 - Implement continuous monitoring of applications, systems, and infrastructure for security vulnerabilities, misconfigurations, and threats.
 - Use automated security testing tools (e.g., **Snyk**, **Fortify**, **SonarQube**) to scan code repositories for security flaws and manage vulnerabilities.
 - Analyse security findings and work with development and operations teams to prioritize and remediate identified risks.
 - Perform regular security audits and penetration tests on applications, systems, and network environments.
- **Incident Response & Security Automation**
 - Automate incident response procedures, including alerting, logging, and escalation to ensure fast response times to security incidents.
 - Implement security automation tools to handle repetitive security tasks such as patch management, encryption, and access control enforcement.
 - Collaborate with the **security operations** team to define and respond to incidents, including security breaches, malware outbreaks, and data leaks.
- **Cloud & Infrastructure Security**

- Ensure that cloud-based and on-premise infrastructure, such as **AWS, Azure,** or **Google Cloud**, follows security best practices and is compliant with organizational security standards.
- Implement and manage security policies and tools to safeguard cloud resources, including access management, encryption, network security, and firewall configurations.
- Perform regular security assessments of cloud environments, including containerized systems (e.g., **Docker, Kubernetes**).
- **Collaboration & Education**
 - Foster a culture of security awareness within the development and operations teams, providing training and guidance on secure coding practices, threat mitigation, and regulatory compliance.
 - Educate teams on the integration of security throughout the entire development lifecycle and assist with the remediation of identified security risks.
 - Stay current on emerging security threats, vulnerabilities, and regulatory requirements, ensuring the organization's DevSecOps practices are up to date.
 - Work closely with cross-functional teams, including IT support, systems administrators, and security teams, to resolve complex issues.
- **Compliance & Regulatory Adherence**
 - Ensure that all applications and infrastructure comply with internal security policies, industry standards (e.g., **GDPR, HIPAA, PCI DSS**), and regulatory requirements.
 - Document security processes, configurations, and decisions for auditing and compliance purposes.

Technical and personal qualifications

- **Technical Skills**
 - **DevOps Tools & Practices:** Expertise in CI/CD tools (e.g., **Jenkins, GitLab CI, Azure DevOps, CircleCI**) and build automation tools.

- **Security Tools & Frameworks:** Proficiency with security testing and automation tools like **Snyk, SonarQube, Fortify, Aqua Security, HashiCorp Vault, OWASP ZAP**.
- **Containerization & Orchestration:** Experience with **Docker, Kubernetes**, and cloud-native security concepts like **Kubernetes Network Policies, PodSecurityPolicies**, and **Service Meshes**.
- **Cloud Security:** Deep understanding of cloud security tools and practices, such as **AWS Security Hub, Azure Security Center, GCP Security Command Center**, and securing cloud-native applications.
- **Identity & Access Management (IAM):** Expertise in managing user permissions and roles in cloud platforms (e.g., **AWS IAM, Azure AD**) and securing access control in multi-cloud environments.
- **Infrastructure as Code (IaC):** Familiarity with tools like **Terraform, CloudFormation**, or **Azure ARM templates** to automate security configurations of cloud infrastructure.
- **Monitoring & Logging:** Experience with **SIEM** tools (e.g., **Splunk, ELK Stack**), vulnerability scanners (e.g., **Nessus, Qualys**), and security monitoring platforms (e.g., **Datadog, New Relic**).
- **Networking & Firewall Management:** Understanding of networking concepts such as **VPNs, firewalls, DNS, load balancing**, and **IP whitelisting** in cloud environments.
- **Incident Response Tools:** Familiarity with incident response tools and techniques, including **Syslog, OSSEC**, and automated alerting.
- **Personal Skills**
 - **Collaboration & Communication:** Ability to work closely with development, operations, and security teams to ensure security is a priority throughout the SDLC.
 - **Problem-Solving & Critical Thinking:** Strong analytical and troubleshooting skills, particularly when identifying and resolving complex security issues in live systems.
 - **Attention to Detail:** High degree of attention to detail to ensure that security configurations are properly implemented and vulnerabilities are mitigated.

- **Leadership & Mentorship:** Ability to mentor and guide teams in adopting secure coding practices, DevSecOps principles, and security automation.
- **Adaptability:** Ability to learn and apply new security techniques and tools in a rapidly changing technological landscape.
- **Time Management:** Effective time management skills, balancing multiple priorities and tasks in a fast-paced, agile environment.
- Excellent knowledge of **English**, both written and spoken, at least at level C1¹⁴.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least four (4) years (Master degree) in Information Technology, Computer Science, Engineering or related field.
- Over 5 years of professional experience as a Dev(Sec)Ops Engineer or equivalent, directly relevant to the tasks and projects described.

¹⁴ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

14. Systems engineer

Key responsibilities

- **Infrastructure Design & Implementation**

- Provision of expert advice and assistance, technology watch, architectural considerations, risk analysis, gap analysis, applicable standards, solution patterns and best practices in the area Systems, infrastructure engineering and virtualized infrastructure (specifically hyperconverged/Nutanix).
- Design, configure, and implement server infrastructure solutions (physical and or virtualized) that meet business needs, ensuring scalability, performance, and reliability.
- Collaborate with development, operations, and security teams to define architecture that supports both business goals and technical requirements.
- Install, configure, and manage servers (physical or virtualized).
- Evaluate and recommend hardware, software, and server infrastructure solutions based on technical requirements.
- Build and maintain automated infrastructure provisioning using tools such as **Terraform**, Ansible.
- Provide expertise in cloud-native applications, containerization (e.g., **Docker**, **Kubernetes**), and serverless technologies.

- **Infrastructure Monitoring & Troubleshooting:**

- Monitor systems/infrastructure performance using industry-standard monitoring tools (e.g., SolarWinds, PRTG, Nagios) and ensure optimal uptime and throughput.
- Troubleshoot, diagnose, and resolve infrastructure-related issues, including hardware and software failures, connectivity problems, and performance degradation.

- **Infrastructure Management & Optimization**

- Monitor and maintain cloud resources to ensure optimal performance, scalability, and cost efficiency.

- Implement cost-management practices to monitor and control cloud expenditures using native cloud tools such as **AWS Cost Explorer** or **Azure Cost Management**.
- Troubleshoot and resolve issues related to cloud services, ensuring high availability and minimal downtime.
- **Security & Compliance**
 - Implement and manage security policies, including identity and access management (IAM), encryption, and systems security.
 - Ensure environments adhere to industry best practices, security guidelines, and compliance standards (e.g., **GDPR, HIPAA, SOC 2**).
 - Regularly perform security audits, vulnerability assessments, and patching of infrastructure.
 - Apply security patches and updates, monitor for security breaches, and investigate any incidents.
- **Documentation & Reporting**
 - Maintain accurate and up-to-date documentation for the infrastructure architecture, configurations, processes, and procedures.
 - Generate reports on system performance, usage, and security compliance for management.
 - Provide knowledge transfer and training for internal teams on best practices.
 - Collaborate with IT teams to ensure integration and compatibility with other enterprise systems (e.g., cloud, data centres).
- **Collaboration & Support:**
 - Work closely with cross-functional teams, including IT support, systems administrators, and security teams, to resolve complex issues.
 - Provide network support for remote employees, including VPN access, VoIP systems, and troubleshooting connectivity issues.
 - Assist in training junior network engineers and provide guidance on network best practices.

Technical and Personal Qualifications

• Technical Skills

- **Nutanix solutions:** Advanced experience with Nutanix AHV, AOS, including core services such as Prism, Object, files, flow. Or equivalent experience without another virtualization platform, with knowledge and basic experience with Nutanix.
- **Linux Administration:** Advanced experience with Linux administration.
- **Windows Administration:** Advanced experience with Windows Server administration.
- **Infrastructure Security:** Deep understanding of infrastructure security concepts including **IAM, role-based access control (RBAC)**, encryption, and secure systems design.
- **Infrastructure as Code (IaC):** Proficient in **Terraform**, Ansible for automated provisioning and management of infrastructure resources. Strong skills in scripting languages such as **Bash, PowerShell, Python**, or **Ruby** for automation tasks.
- **Containerization & Orchestration:** Experience with **Docker, Kubernetes**.
- **Networking:** Experience with configuring and managing network devices like Cisco, Juniper, HP, or other routers, switches, firewalls, and wireless access points.

Personal Skills

- **Problem-Solving & Troubleshooting:** Excellent analytical and problem-solving skills for diagnosing and resolving complex cloud-related issues.
- **Communication & Collaboration:** Strong verbal and written communication skills, able to interact effectively with cross-functional teams and business stakeholders.
- **Attention to Detail:** Ability to design secure, scalable, and cost-efficient solutions with precision and care.
- **Time Management:** Proven ability to manage multiple tasks and priorities, working in a fast-paced and dynamic environment.

- **Adaptability & Continuous Learning:** Willingness to stay current with the evolving cloud landscape, new features, services, and industry trends.
- Excellent knowledge of **English**, both written and spoken, at least at level C1¹⁵.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least four (4) years (Master degree) in Information Technology, Computer Science, Engineering or related field.
- Over 5 years of professional experience as a Systems engineer or equivalent, directly relevant to the tasks and projects described.

¹⁵ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

1.2. Specific profiles

15. IT Expert

Key responsibilities

- Maintain and support IT infrastructure including servers, networks, and endpoints.
- Provide technical support to end-users (Tier 1 & Tier 2) for hardware, software, and network issues.
- Install, configure, and maintain operating systems and standard software packages.
- Monitor systems and network performance to ensure optimal availability and reliability.
- Participate in IT-related projects such as system upgrades, cloud migrations, or security improvements.
- Maintain accurate documentation for systems, procedures, and configurations.
- Implement and enforce IT security best practices and support compliance requirements.
- Collaborate with cross-functional teams to ensure smooth IT operations and project delivery.
- Description of the gap and the roadmap to reach the target objective.
- Assist in adapting business process.
- Draft required documentation.
- Advise/coach on daily implementation steps within working processes.

Technical and personal qualifications

- Proficiency in Windows and Linux operating systems.
- Strong knowledge of networking fundamentals (TCP/IP, DNS, DHCP, VPN, etc.).
- Experience with Active Directory, Microsoft 365, and virtualization technologies (VMware, Hyper-V).
- Familiarity with endpoint protection, backup systems, and IT monitoring tools.

- Basic scripting skills (PowerShell, Bash, or Python) are a plus.
- Understanding of ITIL concepts and service management practices.
- In-depth knowledge and expertise with the specific methodology.
- Previous experience in similar projects implementing, training and guiding an organization into adoption of the methodology.
- Strong problem-solving and analytical skills.
- Ability to work independently and prioritize tasks effectively.
- Strong communication and interpersonal skills.
- Customer-focused mindset with a service-oriented approach.
- Willingness to learn and adapt to new technologies and tools.
- Excellent skills in preparing and writing studies/documentation.
- Ability to apply high quality standards.
- Ability to lead meetings and provide trainings.
- Capability of working in an international/ multicultural environment.
- Excellent knowledge of English, both written and spoken, at least at level C1¹⁶.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor's degree) in Information Technology, Computer Science, Engineering or related field.
- Over 5 years of professional experience as IT Expert or equivalent, directly relevant to the tasks and projects described.

¹⁶ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

16. High Level IT Expert

Key responsibilities

- Design, implement, and oversee complex IT infrastructure solutions across networks, cloud platforms, and data centres.
- Lead strategic IT projects, including architecture planning, system integration, and digital transformation initiatives.
- Serve as a technical advisor to leadership and cross-functional teams, ensuring alignment between IT and business objectives.
- Drive the adoption of cybersecurity best practices, including risk assessment, incident response, and compliance management.
- Evaluate emerging technologies and provide recommendations for innovation and process improvement.
- Mentor and support junior IT staff; contribute to talent development within the Digital Services Unit.
- Develop and maintain enterprise-level documentation and disaster recovery plans.
- Ensure high availability and performance of mission-critical systems and services.
- Provision of expert advice and assistance, technology watch, evaluation studies, architectural considerations, applicable standards, solution patterns and best practices in a specific area of IT or on a specific technology (e.g. enterprise & web content management, XML, portals, business process management, interoperability, artificial intelligence technologies, application life cycle management, test driven development , search technologies, etc.).
- Assistance in the implementation of a software engineering methodology.
- Provision of technical studies, evaluation, assessments, gap analysis, risk analysis documentation.
- Provision of security studies, security assessments and other specific security matters related to ICT infrastructures.
- Elaboration of design documentation, with consultation with stakeholders.
- Elaboration of functional and non-functional requirements and business case analysis related to the area of expertise.

- Deliver the design, installation and configuration of these technologies.

Technical and personal qualifications

- Expert-level understanding of enterprise infrastructure: networking, cloud (Azure, AWS, GCP), virtualization, storage, and security.
- Deep knowledge of IT architecture, systems engineering, and DevOps methodologies.
- Strong experience with automation and scripting (PowerShell, Python, Ansible, Terraform).
- Familiarity with containerization and orchestration tools (Docker, Kubernetes).
- Advanced knowledge of cybersecurity frameworks (NIST, ISO 27001) and compliance standards (GDPR, HIPAA, etc.).
- In-depth knowledge and proven hands-on expertise in specific technologies and/or emerging technologies.
- Expert knowledge in all areas of IT including governance and technological aspects.
- Strategic thinking and leadership skills.
- High level of accountability and decision-making ability.
- Excellent communication skills; able to translate complex technical issues to non-technical stakeholders.
- Project management experience with strong organizational and planning capabilities.
- Adaptability in fast-paced, dynamic environments.
- Capability to write clear and structured technical documentation.
- Ability to lead a team and coordinate meetings.
- Capability of working in an international/multicultural environment.
- Excellent knowledge of English, both written and spoken, at least at level C1¹⁷.

Education and professional experience

¹⁷ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>

- A level of education which corresponds to completed university studies, attested by a diploma, of at least four (4) years (Master degree) in Information Technology, Computer Science, Mathematics, Physics, Engineering, Business Administration, or related field
- Over 8 years of professional experience as High Level IT Expert or equivalent, directly relevant to the tasks and projects described.

2. LOT 2 – Service Desk

1. Service Desk Operator

Key responsibilities/Tasks

- Provide first-line technical support to end-users for both IT and non-IT related issues, ensuring prompt and professional assistance.
- Diagnose and troubleshoot hardware, software, desktop applications, and network connectivity issues; perform basic repairs or escalate complex problems as required.
- Assist in the installation, configuration and maintenance of desktop hardware and software, following organizational guidelines.
- Log and document all incidents and service requests in the ticketing system, maintaining comprehensive and accurate records.
- Support user account management activities such as password resets, access requests, and user provisioning in compliance with organisation policies.
- Monitor and provide status reports via the ticketing tool, ensuring timely follow-up and resolution or escalation.
- Provide logistical and administrative support for mail handling, office supplies procurement and distribution, and other corporate service functions.
- Assist in the management of physical inventory, including office furniture, workspace allocation, maintenance, and relocations.
- Ensure compliance with internal SLAs, IT policies, and data protection standards.
- Deliver high-quality customer service and maintain effective communication with end-users and internal teams.
- Handling support requests related to meeting rooms IT/AV equipment.
- Provide training to newcomers on Service Desk role, responsibilities and workflows.
- Management of mail and office supplies.
- Performing a bi-yearly inventory of IT and non-IT assets (labelling, bar code scanning, preparation of detailed report).

Technical and personal qualifications

- Proven professional experience in IT support or Facility services within a structured support team.
- Demonstrated ability to provide first-line technical assistance to end-users, including hardware, software, and network troubleshooting.
- Ability to understand and anticipate user needs, with effective resource monitoring and prioritization.
- Strong analytical and problem-solving capabilities; able to resolve issues independently or escalate when needed.
- Capable of working both independently and collaboratively in a multicultural and fast-paced environment.
- Flexibility and responsiveness in handling unexpected situations and support demands.
- Strong client orientation with excellent interpersonal and communication skills; committed to a customer-focused support approach.
- Solid understanding of service desk tools – ticketing systems and remote support solutions.
- Awareness of service management practices and service-level agreements (SLAs).
- Discretion and a responsible attitude when handling confidential or sensitive information.
- Commitment to ongoing learning and staying updated with technology trends.
- Excellent knowledge of English, both written and spoken, at least at level C1¹⁸.

Education and professional experience

- A level of education which corresponds to completed university studies, attested by a diploma, of at least three (3) years (Bachelor's degree), or post-secondary education, or secondary education with equivalent professional experience.

¹⁸ Cf. Language levels of the Common European Framework of reference:
<https://europass.cedefop.europa.eu/sites/default/files/cefr-en.pdf>
